

Which links change is personal; where in the body they change is not

Same links, same variability floor, and same weighting as the main figure; both timepoints pooled on the left, shown separately on the right

Change runs from the core outward

Subdivided spine and neck chains are collapsed to one joint each, so a finer marker set does not count the same rotation twice.

790 is the exception to the gradient: its changes are axial rather than distal.

The limbs change in nearly everyone
